Reflection Questions

Answer these in a few sentences each and submit them with your page.

1. Which framework did you choose and why?

The Bootstrap Framework, provides ready-made components such as navigation bars, cards, buttons, and a responsive grid system. It allowed me to build the landing page faster while maintaining a professional appearance.

2. Did you take a mobile-first or desktop-first approach? How did that show up in your code?

I use the Desktop first approach to then expands to two columns on tablets with col-md-6 and three columns on desktops with col-lg-4. Then I used a mobile-first, the grid starts with one column by default using col-12 for phones,

3. Which classes made your card grid responsive? Name them.

The responsive classes were row, g-4, col-12, col-md-6, and col-lg-4. These classes automatically adjust the number of cards displayed per row based on screen size.

4. What is one advantage and one drawback you noticed about using a framework instead of writing all the CSS yourself?

One advantage is that Bootstrap saves development time because many responsive features are already built in. One drawback is that customization can be more limited compared to writing all CSS from scratch.
